

AI Scan Landing Page

FINAL — COMPLETE IMPLEMENTATION SPECIFICATION

The complete customer-facing page is shown first as one coherent system. Developer-only implementation requirements follow after the customer-facing sequence.

Locked content · Controlled orange · Open editorial rhythm · Full Signature High Glass Scan cards

Know what is **costing the business** before deciding what to change.

Inefficiencies, bottlenecks and hidden risks can build across processes, systems and day-to-day work long before their full effect becomes clear.

An IO SKY Scan establishes what is contributing to them, how much they matter and where your money, time or capacity is best directed.

[Start Your Scan](#)

You can know your business well and **still not see everything** affecting it.

You know where work takes longer than it should, where something repeatedly gets in the way or which risks already concern you. What is harder to see from day to day is how they connect — and what may be developing without an obvious sign.

A recurring inefficiency can be part of something larger. A weakness can remain quiet until circumstances expose it. And something that appears manageable on its own can carry very different consequences because another critical part of the business depends on it.

A Scan shows you what is connected, what matters and what deserves your attention.

The assessment follows the **evidence** — not a predetermined answer.

IO SKY does not begin with a preferred solution.

The Scan follows the evidence. If something matters, the assessment establishes why. If it does not, it does not become a recommendation simply because it was detected.

The conclusion may point towards technology, a process change, stronger protection, better use of what you already have — or no major intervention at all.

The purpose is to establish what the evidence supports — including when the right decision is to leave something as it is.

Technology supports the analysis. **Expert judgement** determines what reaches you.

Technology can help process information and identify patterns. But findings are not simply generated and delivered to you.

Before your assessment is finalised, IO SKY reviews what was found, the context around it and the recommendations that follow.

That matters because something can be technically possible without being commercially worthwhile, and not everything that can be detected deserves action.

A finding belongs in your final assessment because it matters — not simply because it could be detected.

Clear enough to understand. Practical enough to **act on.**

Your assessment turns what was found into clear conclusions, recommendations and priorities you can act on.

Assessment Report

See what was found, why it matters and what we recommend.

Priority Roadmap

See where to begin, what should follow and what depends on earlier action.

Executive Summary

The key conclusions and priorities in a concise format for faster decision-making.

Presented for the people who need to use it

Choose who the assessment is primarily for — such as leadership, technical stakeholders or investors. The conclusions stay the same; the presentation and context are adapted to the audience.

Your assessment is also available in your preferred language.

See what the final assessment looks like

Preview how findings, recommendations and priorities are presented — without exposing client information or proprietary methodology.

Preview the Assessment

Know what deserves investment **before making the investment.**

Improving the wrong thing can consume money, time and capacity while the real problem remains unresolved.

A Scan gives you the evidence to decide what is worth changing, what should come first and what may not require investment at all.

Choose the Scan that matches what you need to understand.

Each Scan answers a different type of question and is complete within its defined scope.

Operations examines how work gets done and where meaningful improvement is possible. Cyber examines where the business may be vulnerable, what those vulnerabilities could lead to and where stronger protection is warranted. Elite examines questions where several business-critical areas affect one another and need to be understood together.

OPERATIONS SCAN

Understand where operational improvement is worth pursuing.

Choose Operations when you want to understand how effectively work gets done, what may be holding performance back and where improvement would make a meaningful difference.

The Scan looks at the processes, systems, ways of working and dependencies behind day-to-day operations. It goes beyond where friction appears to establish what is causing it and how it affects time, capacity and performance.

The result is a clearer basis for deciding what is worth improving, where to begin and where change may not be necessary.

Questions this Scan helps answer

- Where are we losing unnecessary time or capacity?
- What is creating friction or limiting performance?
- Are our processes and systems supporting the way we work?
- Which improvements are actually worth pursuing?

What you receive

- ✓ Operations Assessment Report
 - ✓ Priority Roadmap
 - ✓ Executive Summary
- Optional ways to review or present your results ▾

5–7 business days after submission

Start Operations Scan

CYBER SCAN

Know where the business is vulnerable — and what deserves your attention.

Choose Cyber when you want to understand where the business could be exposed, what could happen as a result and where stronger protection is warranted.

The Scan examines vulnerabilities across your systems, accounts, access, data and the way people work with them.

It looks at where weaknesses could lead to unauthorised access, data loss, fraud or disruption, what the consequences could be and how well the business is currently protected.

The result is a clear view of what genuinely puts the business at risk, what deserves attention first and where stronger protection is needed.

Questions this Scan helps answer

- Where could our systems, accounts or data be vulnerable?
- Could weaknesses expose us to fraud, data loss, unauthorised access or disruption?
- How well are we currently protected?
- Which vulnerabilities deserve attention first?

What you receive

- ✓ Cyber Assessment Report
 - ✓ Security Roadmap
 - ✓ Executive Summary
- Optional ways to review or present your results ▾

7–10 business days after submission

ELITE SCAN

Understand what changes when critical areas of the business are considered together.

Elite is for situations where understanding one area on its own would leave an important part of the question unanswered.

It looks across operations and cybersecurity together with other business-critical areas such as technology, data, resilience and critical dependencies — wherever they matter to the question being examined.

The purpose is to understand how one area affects another, where the business depends on something critical and what those connections change about the decisions that should come first.

Elite looks at the connections that matter

How one area affects another

Could a problem in one part of the business be creating consequences somewhere else?

Where the business depends on something critical

Could reliance on a system, process, control or source of information create wider consequences?

What should come first

When several areas need attention, which decisions should be made first — and what depends on them?

Questions this Scan helps answer

- Are important areas of the business affecting one another?
- Where are critical dependencies creating wider consequences?
- Are operational, technology, security or data concerns connected?
- When several areas need attention, what should come first?

What you receive

- ✓ Elite Assessment Report
 - ✓ Strategic Priority Roadmap
 - ✓ Executive Summary
 - ✓ Live Expert Review Session — Included
- Optional Executive Briefing ▾

10–14 business days after submission

Start Elite Scan

Know **exactly** what happens after you choose your Scan.

01

Purchase your Scan

Choose your Scan and complete your payment.

02

Create your account

After successful payment, create your IO SKY account and access your Scan.

03

Complete your assessment

Your Scan develops around what your answers reveal.

Complete the assessment at your own pace. Your progress is saved automatically, and where your answers show that something needs a closer look, the Scan explores that area further to gather the context needed.

04

Submit your Scan

Submit your completed Scan. Your estimated delivery period begins from this point.

05

Analysis and expert review

IO SKY analyses what was gathered and reviews the conclusions, business context and recommendations before finalising your assessment.

06

Receive your assessment

Your completed assessment becomes available through your IO SKY account within the delivery period for your selected Scan.
Your Assessment Report, Roadmap and Executive Summary are available together with any additional deliverables included with your Scan.

HELP ME CHOOSE

Not sure which Scan is right for you?

If you're unsure which scope best matches what you want to understand, we'll help you work that out before you choose.

Help Me Choose

Customer-facing UI ends here.

Everything from this point onward is implementation guidance. It must not be rendered as customer-facing copy unless a requirement explicitly says otherwise.

Orange is semantic, not decorative.

01	costing the business
02	still not see everything
03	evidence
04	Expert judgement
05	act on.
Decision Value	before making the investment.
06	need to understand.
07	exactly

Also orange: section eyebrows, the three primary Start Scan purchase CTAs, and functional active/focus states. Preview the Assessment and Help Me Choose are secondary soft CTAs with a restrained orange outline and off-white text. Prices, body copy and Scan-card borders remain off-white/teal.

HARD COLOR TOKEN: every orange word, eyebrow, primary CTA fill, secondary CTA outline and orange focus/active state must use IO SKY Orange #F58A1F exactly (RGB 245, 138, 31) — never yellow, amber, gold or any alternate orange. Do not substitute a visually similar token.

The three **Scan cards** are the visual climax.

Equal status	Operations, Cyber and Elite use the same card width, height, material treatment and CTA baseline. No card is larger, raised, badged, recommended or orange-outlined.
Actual glass	Use the approved centrally controlled Signature High Glass material. The card must read as translucent/refractive dark-teal glass, not as a flat dark rectangle.
No orange perimeter	Orange may exist as restrained internal warm reflection in the material, but never as a glowing or orange card border.
No internal divider lines	Use typography and whitespace for hierarchy. Do not insert horizontal separators inside the Scan cards.
Full approved content	Each card contains its complete approved core copy, all four questions, What you receive, collapsed add-on disclosure, delivery, price and Start Scan CTA. Elite additionally includes “Elite looks at the connections that matter” and all three approved connection explanations.
Responsive behavior	Desktop shows the three equal cards side by side. Mobile stacks them while preserving content, order and equal treatment. Never shrink text to the point of illegibility simply to keep a fixed card height.

Collapsed by default. Complete when opened.

OPERATIONS — EXPANDED

These additions provide additional ways to discuss or present your results. They do not change the assessment itself or its conclusions.

Live Expert Review Session — €295 excl. VAT

Discuss your completed assessment directly with an IO SKY expert, including the key findings, priorities, recommendations and your questions.

Executive Briefing — €395 excl. VAT

A professionally produced visual briefing of the key conclusions, priorities and recommendations, designed for leadership and other decision-makers.

Executive Briefing + Live Expert Review Session — €595 excl. VAT

Includes both the Executive Briefing and Live Expert Review Session.

CYBER — EXPANDED

These additions provide additional ways to discuss or present your results. They do not change the assessment itself or its conclusions.

Live Expert Review Session — €295 excl. VAT

Discuss your completed assessment directly with an IO SKY expert, including the key findings, priorities, recommendations and your questions.

Executive Briefing — €395 excl. VAT

A professionally produced visual briefing of the key conclusions, risks and priorities, designed for leadership and other decision-makers.

Executive Briefing + Live Expert Review Session — €595 excl. VAT

Includes both the Executive Briefing and Live Expert Review Session.

ELITE — EXPANDED

The Executive Briefing provides an additional way to present your results. It does not change the assessment itself or its conclusions.

Optional additions stay subordinate to the Scan.

ELITE — OPTIONAL EXECUTIVE BRIEFING

The Executive Briefing provides an additional way to present your results. It does not change the assessment itself or its conclusions.

Executive Briefing — €395 excl. VAT

A professionally produced visual briefing of the key conclusions, relationships, dependencies and strategic priorities, designed for leadership and other decision-makers.

Landing page	Add-ons are informational only. No checkbox, Add button, quantity selector, calculated total or preselected add-on appears on the landing page.
Operations / Cyber	The disclosure is collapsed by default. When opened it shows the reassurance plus all three approved options and exact copy above.
Elite	Live Expert Review Session remains visibly Included under What you receive. “Optional Executive Briefing” is a separate collapsed disclosure.
Selection	Actual add-on selection happens only in purchase configuration before payment. Nothing is preselected.

Configuration comes **before payment.**

Selected Scan	The specific Operations, Cyber or Elite Scan is carried into the purchase configuration from the corresponding Start Scan CTA.
General information	Collect the required general/customer information and preserve it with the pending order. The saved information must remain associated with the purchased Scan and resulting account context.
Preferred language	Capture the customer's preferred assessment language before the assessment begins.
Primary audience	Capture who the assessment is primarily intended for — for example leadership, technical stakeholders or investors — before the assessment begins. Findings do not change; presentation/context can adapt.
Eligible additions	Operations/Cyber: none, either one, or both add-ons. Elite: Executive Briefing only because Live Expert Review Session is included. Nothing is preselected.
State preservation	General information, language, audience and eligible add-on selections persist through checkout and successful purchase so the customer does not have to re-enter them.

The customer sees the **final payable total** before confirming payment.

Calculation

Automatically recalculate the order total from the selected Scan + eligible additions + applicable VAT/tax treatment.

VAT validation

Use appropriate VAT validation/tax calculation. The final amount presented must reflect the applicable treatment for the customer/order.

Review before payment

Show the final payable total clearly before the customer confirms payment.

Payment verification

Do not treat front-end success as authoritative. Successful payment must be verified by the backend/provider event before account-creation entitlement is issued.

No refund workflow

Do not introduce a refund/chargeback feature or product workflow into this Scan funnel unless IO SKY separately instructs it.

Verified Scan payment is the **only** public self-service account path.

- 01** Public account creation is permitted exclusively after a successfully verified AI Scan purchase.
- 02** There is no other public/self-service registration route — not a direct URL, hidden route, API endpoint or authentication-provider signup flow.
- 03** The post-payment account-creation entitlement/token is backend-verified, bound to the successful order/payment and intended purchaser, single-use and time-limited.
- 04** A shared or replayed URL alone can never create an account.
- 05** Consume/invalidate the entitlement after successful account creation. Retries must be safe and duplicate accounts/Scan purchases must be prevented.
- 06** All other Client, Developer, Admin and Technical Operator accounts require an authorised IO SKY invitation/admin process. Super Admin is never publicly self-registerable.

Progress persists. Publication remains controlled.

Autosave	Assessment answers and progress autosave continuously enough that normal navigation or leaving the session does not cause material loss.
Resume later	The customer can leave and continue later with saved progress.
Adaptive assessment	Product-specific paths, conditional questions and follow-up questions may explore areas further when answers show more context is needed.
Submission	The Scan becomes submitted only when the customer explicitly submits the completed assessment. The estimated delivery period begins from this point.
Lifecycle	Assessment → Processing/Analysis → Human Review → Authorised Approval → Publish → Client Portal.
Visibility	AI output is never automatically visible to the Client. Final results become client-visible only after required human review and authorised publication.

Each CTA has one clear job.

Start Your Scan	Accessible anchor/smooth scroll to Section 06 — Choose Your Scan. It does not start checkout.
Start Operations Scan	Open the Operations purchase configuration.
Start Cyber Scan	Open the Cyber purchase configuration.
Start Elite Scan	Open the Elite purchase configuration.
Preview the Assessment	Open the genuine premium assessment preview. It is a secondary outlined CTA and must not visually compete with the purchase CTAs.
Help Me Choose	Direct telephone action. Mobile opens the native dialer with the centrally configured official IO SKY number prefilled. Desktop clearly presents the official number and a supported call action. Do not redirect to Contact or Discovery Call.

Do not reinterpret the approved page.

- | | | | |
|-----------|--|-----------|--|
| 01 | Sections 01–07 customer-facing copy remains locked. Do not rewrite, shorten, paraphrase or expand it. | 10 | Section 07 is a vertical connected 01→06 journey without boxes/cards and without clipping/overlap. |
| 02 | Sections 02–04 remain open editorial sections — not boxes, cards or column grids. | 11 | Help Me Choose occupies its own open customer-facing space; technical phone behavior appears only in the developer specification. |
| 03 | Section 05 has no 01/02/03 numbering and no heavy cards or three-package visual treatment around the three deliverables. | 12 | All customer-facing text wraps cleanly at desktop and responsive breakpoints. No clipping, collisions, overlays or unreadably small text. |
| 04 | Preview the Assessment is clearly clickable through a restrained orange outline with off-white text. | 13 | Orange emphasis follows the exact semantic map and uses IO SKY Orange #F58A1F exactly for orange words, eyebrows, primary CTA fills and secondary CTA outlines; prices remain off-white. |
| 05 | Section 06 is the deliberate exception to the open-page rhythm: three equal Signature High Glass cards side by side on desktop, stacked on mobile. | 14 | Customer-facing page structure is complete before developer-only explanation begins. |
| 06 | Each Scan card contains the full approved core content and all four questions. Elite also contains all three “connections that matter” explanations. | 15 | Purchase configuration preserves general information, preferred language, intended audience and eligible add-on selections through checkout. |
| 07 | No internal horizontal divider lines inside the Scan cards and no orange perimeter/glow. | 16 | Only backend-verified successful Scan payment can issue the public account-creation entitlement. |
| 08 | No Scan is recommended, enlarged, raised, badged or otherwise visually favoured. | 17 | Scan progress autosaves/resumes; final results remain hidden until human review, authorised approval and publish. |
| 09 | Expanded add-on states use the exact customer-facing copy in this specification and remain collapsed by default on the landing page. | | |
