

Contact Page

Version 1.0 · Design, Content & Implementation Specification

Purpose

Define the complete IO SKY Contact Page for consistent implementation across desktop, tablet and mobile: customer-facing copy, layout, typography, spacing, form controls, routing, validation, success and failure states, accessibility and implementation behaviour.

DESIGN PRINCIPLES

Calm · Control · Confidence · Clarity. Contact is intentionally minimal. It routes an enquiry clearly without turning the page into a second sales or About page.

A minimal, deliberate contact experience

Desktop uses a spacious two-column composition: customer-facing context on the left and the form on the right. Tablet collapses when either column becomes compressed. Mobile is a single reading flow.

CONTACT

A good conversation begins with **understanding** what it is about.

Do you have a question, would you like to discuss something with us, or are you contacting us about an existing collaboration? Tell us briefly what it is about. We make sure your message reaches the people who can help you further.

Would you like to explore what could be improved within your organisation and what is truly needed for that? Then we prefer to begin with understanding rather than with a solution. For that, a Discovery Call is the right first step.

Book a Discovery Call →

Desktop	12-column composition · content ≈ 5 columns · breathing space ≈ 1 column · form ≈ 6 columns.
Tablet	Retain two columns only while both remain comfortably readable; otherwise stack.
Mobile	Eyebrow → headline → two body paragraphs → Discovery Call link → form → global footer.

Do not add

Testimonials, FAQ, case studies, service catalogue, team statistics, map, social feed, newsletter opt-in, budget, phone, company size, deadline or an additional sales CTA.

Customer-facing form

Field order, labels, placeholders and control types below are authoritative.

Name *

Name	Text	Required	Your name
Email address	Email	Required	name@company.com
Company	Text	Optional	Company name
What is your message about?	Single select	Required	Five approved options
Message	Textarea	Required	Tell us briefly what your question is about.

Validation behaviour

Validate on blur or submit, not aggressively during typing. Server-side validation is mandatory. A recoverable failure preserves all entered values. Prevent duplicate submission.

Typography, glass and spacing

Background	#0C2F33	Deep Teal; no pattern or grid; subtle tonal gradient only.
Glass surface	#103438	Dark, clearly visible against the page while still reading as glass rather than a conventional card.
Glass border	1px subtle light/teal border	Low contrast; no thick card outline.
Production blur	18-24px	Use backdrop blur where supported; graceful solid-surface fallback.
Accent	#F58A1F	Eye brow, active/focus states, text link and primary submit CTA.
Text	Off-white + soft gray	Clear hierarchy; avoid harsh pure white for long body copy.

Typography

Eye brow	12-14px / 600-700	Uppercase, increased tracking
H1	48-56 desktop · 36-42 tablet · 32-36 mobile	600-700; tight leading
Body	18 desktop · 16-18 mobile	400; 1.55-1.65 line-height
Labels	14px / 600	Quiet but explicit
Inputs	16px / 400	Never below 16px on mobile
Microcopy	12-13px / 400	Privacy/helper content only

Spacing

Base system: 8 / 16 / 24 / 32 / 48 / 64 / 96 / 120 / 144px. Desktop vertical page padding: 120-144px. Main column gap: 64-96px. H1 to body: 24-32px. Paragraph gap: 16-20px. Intro to Discovery Call link: 24px. Form padding: 40px desktop, 32px tablet, 24px mobile. Field-group gap: 20-24px. Label to control: 8px. Controls: 52-56px high. Textarea target: 160px. Submit button: 52-56px.

Behaviour across devices

Desktop $\geq 1200\text{px}$	Two columns with generous negative space. Do not allow the form to become excessively wide.
Tablet 768-1199px	Reduce headline and gutters. Stack when the two-column composition no longer feels calm.
Mobile $< 768\text{px}$	Single column, approximately 24px horizontal padding, full-width controls.
Touch	Minimum target height approximately 48px. No hover-only information.
Focus	Visible keyboard focus using IO SKY orange; restrained, not glowing.
Dropdown	Keyboard operable; Escape closes; selected value persists; preserve accessible semantics.

Micro-interactions

Transitions should be subtle and fast. Hover may slightly strengthen border/surface contrast. Focus must remain more explicit than hover. Respect reduced-motion preferences. Do not animate layout in a way that moves fields while the customer is completing the form.

Complete the interaction without a second sales pitch

On success, replace the form content inside the same dark glass surface.

MESSAGE RECEIVED

Thank you. Your message is in the right hands.

We'll review your message and make sure it reaches the right people within IO SKY.
We'll contact you via the email address provided.

Back to IO SKY

Implementation: Back to IO SKY routes to the IO SKY homepage (/).

Failure

Your message has not been sent yet.

Something went wrong while sending. Your information has been retained. Please try again.

Try again

Repeated failure fallback: If repeated submission attempts fail, preserve all completed fields and show only the approved fallback route: support@iosky.nl. Clearly state that the form submission was not received. The fallback address must be configurable and easy to change without a code change; do not hardcode it. Show it only after repeated submission failure. Never expose raw technical errors.

Required behaviour

Submission	Client-side validation improves UX; server-side validation remains authoritative.
Routing	Store the selected subject as a controlled enum and route server-side. Do not infer routing from the free-text message.
Persistence	Retain form state across recoverable network and server failures.
Security	Safely process input, protect against injection, apply server-side rate limiting and abuse controls, and avoid unnecessary logging of message content. Use non-intrusive bot protection where required; do not introduce a visible CAPTCHA unless abuse levels make it necessary.
Privacy	A Contact submission is not marketing consent. Privacy wording must match the authoritative Privacy Policy before production.
Analytics	Only non-sensitive events: form view, validation-error category, submit attempt, submit success and submit failure. Never send message content to analytics.
Accessibility	Semantic labels, programmatic error association, keyboard operation, sufficient contrast, reduced-motion support and accessible status announcements.
Discovery Call	The text link routes to the existing Discovery Call page. Do not duplicate that page's qualification flow here.

Release condition

Release only after the approved copy, responsive layout, field contracts, validation, routing, privacy alignment, success/failure states, accessibility and security behaviour have been implemented and tested. Do not add fields, sales content, public mailbox lists or extra CTA sections without Product Owner approval.
