Version 1.6 - Final Developer Implementation Specification

Status: IMPLEMENTATION READY

Calm. Control. Confidence. Clarity.

DISCOVERY CALL

Let's **understand** what your business needs next.

Tell us where you are today, what you want to improve and what you want to achieve.

We'll use your answers to prepare for a focused Discovery Call.

30 minutes • Focused conversation • Prepared around your business

Discovery Calls are normally held by phone. We will call you at the number provided.

ABOUT YOU

Full name *

Your full name

Work email *

name@company.com

Phone number *

+31 v

6 12345678

Used for scheduling and your Discovery Call.

Company name *

Company

Company website Optional

Help us understand what you're looking to improve *

What would you like to improve, solve or explore? Share any context you think is relevant - it gives us a clearer understanding of what you want to achieve.

Preferred period *

Select preferred period

Request a Discovery Call

* Required fields. Submission is a request; it does not confirm a booking.

2. Exact Customer Copy & Field Contract

Eyebrow: DISCOVERY CALL

Headline: Let's understand what your business needs next.

Supporting copy: Tell us where you are today, what you want to improve and what you want to achieve. We'll use your answers to prepare for a focused Discovery Call.

Expectation line: 30 minutes • Focused conversation • Prepared around your business

CTA: Request a Discovery Call

Area	Exact visible field / behavior
About you	Full name *; Work email *; Phone number *; Company name *; Company website (Optional).
Your business	Your role *; Company size *; Industry *.
Improve	Required multi-select: all 13 approved improvement options.
Context / preference	Help us understand what you're looking to improve *; Preferred period *.

Context helper: What would you like to improve, solve or explore? Share any context you think is relevant - it gives us a clearer understanding of what you want to achieve.
Phone helper: Used for scheduling and your Discovery Call. Helper and validation text must sit directly below the related field with sufficient spacing. Wrapped text expands the layout; it must never overlap, clip, or sit on top of another field.

International phone input and validation

- Use one international phone control: editable country selector (country + calling code) plus local-number input. A likely country may be preselected from locale/location, but the user can always change it.
- Accept normal human input, local trunk prefixes and pasted international numbers. With Netherlands selected, '06 12345678' normalizes to '+31612345678'. Pasting '+31 6 12345678' must not create a duplicated '+31'.
- Validate client-side for immediate feedback and again server-side before submission. Normalize/store the authoritative valid value in E.164.
- On failure, preserve every other field, mark only Phone number, focus/scroll to it when appropriate, and show: 'This phone number doesn't look right. Check the country code and number.' Never expose raw technical/provider errors.

Customer-facing call expectation: Discovery Calls are normally held by phone. We will call you at the number provided. Booking confirmation and appointment details are always sent to the submitted work email address.

Controlled-control requirements for this revision:

- Industry is a searchable, alias-aware single-select. Customer-entered search terms such as 'ziekenhuis', 'zorg', 'gemeente', 'ministerie' or 'bouw' must surface the corresponding controlled canonical category defined in Section 3; only the confirmed canonical category is stored.
- Improvement areas are a required multi-select and show the customer guidance: 'Select everything that applies - any combination is possible, and it's fine if you're not sure yet.' The approved values include 'I'm not sure yet', which may be selected alone or in combination.

Glass Surface & Input Contrast Contract

The outer Discovery Call form container uses the approved global IO SKY Signature High Glass System. Inputs and controls remain solid dark teal for contrast. All other approved Discovery Call content, workflow, scripts, states, layout and controlled option lists remain unchanged.

Primary glass surface

IO SKY Signature High Glass System

Global shared material. No page-specific Discovery Call glass variant.

Input / select surface

#0F3438

Darker solid teal control surface - never transparent.

Mandatory behavior

- The outer form container must use the centrally controlled IO SKY Signature High Glass System; no page-specific Discovery Call glass variant is permitted.
- Input, textarea, search, dropdown and unselected multi-select controls now use solid #0F3438.
- Controls must read clearly as darker filled fields and must never appear transparent, washed out or black.
- Input/control surfaces remain solid dark teal for contrast and do not individually become Signature Glass.
- Use the same solid control fill for dropdown triggers, search fields and unselected chips unless an approved selected/focus state applies.
- IO SKY Orange remains reserved for intentional emphasis, focus/selected states and primary actions.
- This glass/control hierarchy applies wherever this shared IO SKY treatment is used; page-specific specifications remain authoritative for content and layout.

Final visual balance

Dark glass establishes hierarchy; darker solid teal fields remain clearly visible and usable. Neither surface may drift toward black or transparency.

3. Select, Dropdown, Search & Multi-Select Option Contracts

All select/search controls must use explicit controlled values. Developers must not invent additional options, silently rename labels, or implement free-text values where this specification defines a controlled list. The customer-visible placeholder remains visible until a valid selection is made.

Your role

Customer-visible option	Backend value
Founder / Owner	FOUNDER_OWNER
Executive / C-level	EXECUTIVE_C_LEVEL
Operations	OPERATIONS
Sales / Growth	SALES_GROWTH
Technology / IT	TECHNOLOGY_IT
HR / People	HR_PEOPLE
Other	OTHER

Company size

Customer-visible option	Backend value
1-10	SIZE_1_10
11-50	SIZE_11_50
51-200	SIZE_51_200
201-500	SIZE_201_500
501-1,000	SIZE_501_1000
1,001+	SIZE_1001_PLUS

Industry - searchable, alias-aware single-select

Industry is a controlled single-select presented as a searchable combobox/autocomplete - not a free-text field and not a scroll-only dropdown. The customer may type the industry, organisation type or a familiar Dutch/English term. Matching aliases must surface the correct canonical category for selection. Only the selected canonical category is stored. Other remains available when no category fits.

Industry options	Industry options
Accounting	Food & Beverage
Advertising & Marketing	Government & Public Sector
Aerospace & Defense	Healthcare
Agriculture & Farming	Hospitality & Travel
Architecture & Design	Human Resources & Recruitment
Automotive	Insurance
Banking	Legal Services
Biotechnology & Life Sciences	Logistics & Supply Chain
Business & Professional Services	Manufacturing
Construction	Nonprofit & Social Impact
Consulting	Pharmaceuticals
Consumer Goods	Property & Real Estate
Cybersecurity	Retail
Data & Analytics	SaaS & Software
E-commerce	Security Services
Education	Telecommunications
Energy & Utilities	Technology & IT
Engineering	Transportation & Mobility
Entertainment & Media	Other
Financial Services	

Industry search interaction & alias logic

Required interaction: clicking/focusing Industry opens the controlled suggestions; typing filters them immediately. The control must support mouse, touch and full keyboard navigation. The user must never be forced to scroll through the complete list. Search is case-insensitive and should tolerate ordinary spacing/punctuation differences. Aliases are search terms only: they must not create new stored industry values and must not be silently auto-saved without the customer selecting/confirming the surfaced canonical result.

Required alias examples

Healthcare <- healthcare, zorg, hospital, ziekenhuis, dentist, tandarts, doctor, huisarts, clinic, kliniek, nursing home, care home, ouderenzorg, care.
Government & Public Sector <- government, overheid, municipality, gemeente, ministry, ministerie, public authority, government agency.
Construction <- construction, bouw, bouwbedrijf, building contractor, contractor.
SaaS & Software <- SaaS, software, software company, softwarebedrijf. E-commerce <- e-commerce, webshop, online store.
Transportation & Mobility <- transport, transportation, transportbedrijf, mobility. These are minimum examples; developers may expand alias coverage without adding or renaming canonical categories.

Preferred period

Customer-visible option	Backend value
As soon as possible	ASAP
Within 1-2 weeks	WITHIN_1_2_WEEKS
Within 1 month	WITHIN_1_MONTH
Within 1-3 months	WITHIN_1_3_MONTHS
More than 3 months	MORE_THAN_3_MONTHS
I'm flexible / exploring	FLEXIBLE_EXPLORING

What would you like to improve? - required multi-select

Customer guidance shown directly below the heading: 'Select everything that applies - any combination is possible, and it's fine if you're not sure yet.' At least one value is required. Every normal option can be combined with every other option. 'I'm not sure yet' is also allowed on its own or together with other options. Selecting one value must never deselect another.

Customer-visible option	Backend value
Revenue & growth	REVENUE_GROWTH
Operations & workflows	OPERATIONS_WORKFLOWS
AI & automation	AI_AUTOMATION
Custom software & platforms	CUSTOM_SOFTWARE_PLATFORMS
Web applications & portals	WEB_APPS_PORTALS
Mobile applications	MOBILE_APPLICATIONS
Data & infrastructure	DATA_INFRASTRUCTURE
Security	SECURITY
Talent & recruitment	TALENT_RECRUITMENT
Customer service & support	CUSTOMER_SERVICE_SUPPORT
Business communications & phone systems	BUSINESS_COMMUNICATIONS_PHONE
Technical support	TECHNICAL_SUPPORT
Monitoring & optimization	MONITORING_OPTIMIZATION
I'm not sure yet	NOT_SURE_YET

4. Request Creation & Authoritative Data

- Valid submission creates exactly one authoritative Discovery Request and activity event.
- Submission means request received; it does not mean the Discovery Call is booked.
- Store source/page context, page language, contact/company data, selected controlled values, free-text context, conversation_language, automation_mode, qualification state and booking linkage.

5. Conversation Language Determination

- Priority 1: language of request content. Dutch -> nl; English -> en when reliable.
- Priority 2: page/form language when free text is insufficient.
- Priority 3: live conversation switch to the other supported language; persist the new language.
- Only Dutch and English are supported.

6. AI Scheduling Assistant - Scope & Operating Controls

- Trigger only after an explicit Discovery Call request has been committed.
- Purpose: qualification + scheduling + confirmation + handoff.
- Before request-specific details, confirm prospect name and company name. No OTP.
- AI scheduling contact window: 09:00-17:00 Europe/Amsterdam; it is not a 24/7 autonomous agent.
- Do not ask budget. Do not promise pricing, scope, delivery dates, proposal acceptance or commercial eligibility.
- Super Admin can take over manually; pending AI contact/retry/callback jobs then become ineligible.

7. Dutch AI Scheduling Assistant - Exact Script

- Hallo, u spreekt met de scheduling assistant van IO SKY. U heeft een Discovery Call aangevraagd. Komt het nu kort uit om uw aanvraag te bevestigen en een geschikt moment in te plannen?
- **Verification:** Voordat we verdergaan: spreek ik met {{prospect_name}} van {{company_name}}?
- **Q1:** Kunt u kort toelichten wat op dit moment de belangrijkste uitdaging of beperking is die u wilt oplossen?
- **Q2:** Wat zou voor uw organisatie een succesvolle uitkomst zijn?
- **Q3:** Is er een specifieke aanleiding of termijn waardoor dit voor uw organisatie nu relevant is?
- **Scheduling:** Dank u, dat geeft voldoende context. Ik kijk nu naar de beschikbare momenten voor een Discovery Call.
- **PHONE:** De Discovery Call staat gepland op {{meeting_date}} om {{meeting_time}} {{meeting_timezone}}. IO SKY belt u op het bij uw aanvraag opgegeven telefoonnummer.
- **VIDEO:** De Discovery Call staat gepland op {{meeting_date}} om {{meeting_time}} {{meeting_timezone}}. U ontvangt de bevestiging met de link voor het videogesprek.
- **Close:** U ontvangt de bevestiging met de definitieve gegevens. Dank u wel en tot dan.

8. English AI Scheduling Assistant - Exact Script

- Hello, this is the IO SKY scheduling assistant. You requested a Discovery Call. Is now a convenient moment to briefly confirm your request and arrange a suitable time?
Hello, this is the IO SKY scheduling assistant. You requested a Discovery Call. Is now a convenient moment to briefly confirm your request and arrange a suitable time?
- **Verification:** Before we continue, am I speaking with {{prospect_name}} from {{company_name}}?
- **Q1:** Could you briefly explain the main challenge or limitation you're looking to solve right now?
- **Q2:** What would a successful outcome look like for your organization?
- **Q3:** Is there a specific reason or timeframe that makes this relevant for your organization now?
- **Scheduling:** Thank you. That gives us enough context. I will now check the available times for a Discovery Call.
- **PHONE:** Your Discovery Call is scheduled for {{meeting_date}} at {{meeting_time}} {{meeting_timezone}}. IO SKY will call you on the phone number provided with your request.
- **VIDEO:** Your Discovery Call is scheduled for {{meeting_date}} at {{meeting_time}} {{meeting_timezone}}. Your confirmation will include the link for the video call.
- **Close:** You will receive a confirmation with the final details. Thank you, and we look forward to speaking with you.

9. Qualification, Retries, Callbacks & Human Handoff

- Capture main challenge, desired outcome and reason/timeframe; avoid redundant questioning.
- Store structured answers and factual summary; never store model chain-of-thought.
- Retries/callbacks revalidate authoritative state. If the prospect or IO SKY resolves the request before a retry, cancel/suppress it.
- Unsupported language, ambiguous state, exhausted retry policy or unsafe provider inconsistency routes to manual follow-up.

10. Availability, Booking & Calendar

- Discovery Call availability default: Monday-Friday 13:00-17:00 Europe/Amsterdam.
- Default duration: 30 minutes. Default post-call buffer: 15 minutes.
- AI and Super Admin manual booking use the same authoritative scheduling service.
- Selected slot is revalidated concurrency-safely before commit.
- BOOKED only after authoritative booking and required calendar event commit. Email delivery is downstream.

11. Call Type - PHONE / VIDEO

- PHONE is the authoritative default and standard customer-facing Discovery Call type.
- The customer-facing Discovery Call flow must not expose a PHONE/VIDEO selector.
- Authorised IO SKY users must be able to decide internally, per Discovery Call, whether the meeting remains PHONE or is changed to VIDEO. This must be available in the authorised internal workflow and configurable without a code change.
- PHONE: the email confirmation clearly states that IO SKY will call the prospect at the submitted telephone number. No meeting URL and no Join Meeting CTA are shown.
- VIDEO: an authorised IO SKY user must be able to add/configure the secure meeting URL easily for that booking. The confirmation email identifies the appointment as a video call and contains one primary 'Join Meeting' CTA in IO SKY Orange #F58A1F. The CTA opens the trusted meeting URL directly, so the prospect can join without returning to the website or re-entering booking data.
- The meeting URL is booking-specific/trusted, is never publicly exposed, and never appears in customer-facing form fields. Server-side controls validate/allowlist trusted HTTPS meeting URLs before use.
- Changing call type after booking reconciles the booking, calendar event, meeting resource, portal state where applicable, and future communications. If VIDEO changes back to PHONE, future communications remove the meeting URL and Join Meeting CTA.

12. Customer Communications & Reminders

- Use the approved DWF-01 through DWF-09 email specification and shared IO SKY Email Design Language.
- Customer reminders: 24 hours and 1 hour before; state-aware; expired offsets are not backfilled.
- Reschedule preserves old booking until replacement commits successfully.
- Cancellation suppresses future reminders. Delivery failures retry independently.
- Every confirmed Discovery Call booking must generate/send its booking confirmation and relevant appointment details to the prospect's submitted work email address, irrespective of whether scheduling was completed by AI or an authorised human user and irrespective of whether the internal call type is PHONE or VIDEO.

VIDEO confirmation email requirement: When `call_type = VIDEO`, the booking confirmation must contain the trusted meeting URL behind a clear primary 'Join Meeting' button using IO SKY Orange #F58A1F. The button must open the meeting URL directly. When `call_type = PHONE`, this button and meeting URL must not render. Email rendering must remain accessible and include a readable text-link fallback if the button cannot be used by the recipient's email client.

13. Super Admin Portal & Categorized Notifications

- One coherent record/timeline shows prospect, request, AI scheduling/qualification, booking, call type, history and outcome.
- Categories: ACTION REQUIRED; UPCOMING / CONFIRMED; CHANGED; CANCELLED; NO-SHOW / REVIEW; COMPLETED / HISTORY.
- Cancelled calls immediately leave Upcoming/Confirmed. Reschedules never leave old and new occurrences both active.
- Critical failures/manual intervention and missing outcomes remain actionable until resolved.

14. Pre-Call Briefing & Actual Discovery Call

- Internal reminder: 30 minutes before an eligible upcoming call.
- Briefing shows prospect/company/contact/language, original request, AI qualification, call type/date/time/timezone, phone number or video link, and relevant history.
- Human objectives: understand; validate; determine fit/value; determine appropriate next step.
- The actual Discovery Call is not forced into a rigid script.

15. Completion, No-Show & Commercial Outcome

- Passing scheduled end time alone never marks COMPLETED.
- Authorized outcome records COMPLETED or NO_SHOW; no-show is not inferred solely from weak telemetry.
- Commercial outcomes: FOLLOW_UP_REQUIRED; SOLUTION_SCOPING; PROPOSAL_NEXT; NOT_A_FIT; NO_CURRENT_OPPORTUNITY.
- Follow-up/scoping/proposal outcomes require next action, owner and due date.
- AI cannot autonomously set price, scope, proposal, rejection or final commercial outcome.

16. State, Failure Recovery, Security & Audit

- Keep Discovery Request, Booking, Commercial Outcome, Automation Mode and Call Type as separate authoritative domains.
- Idempotency prevents duplicate bookings, calendar events and logical customer-visible deliveries.
- Calendar provider timeout requires reconciliation before another create attempt.
- Queued work reloads authoritative state immediately before execution.
- Admin mutations require authorization and audit logging. Trusted customer URLs are server-generated/HTTPS/allowlisted. Do not log secrets, sensitive URLs or model chain-of-thought.

17. Implementation Acceptance Criteria - PASS / FAIL

#	Criterion	Result
1	Supplied IO symbol is rendered without the original black image background.	PASS / FAIL
2	Customer reference is a complete Discovery Call page, not a generic contact page.	PASS / FAIL
3	Hero eyebrow, headline, supporting copy, expectation line and CTA match this specification.	PASS / FAIL
4	Signature High Glass outer form container, solid dark teal controls, off-white text and restrained IO SKY Orange are applied consistently.	PASS / FAIL
5	Every select/dropdown/search/multi-select uses the exact controlled options defined in Section 3.	PASS / FAIL
6	Industry is a searchable single-select using the specified controlled industry list.	PASS / FAIL
7	Role, company size and preferred period match the specified lists; no Preferred contact method field is exposed.	PASS / FAIL
8	Improvement areas are a required multi-select, include Technical support and Monitoring & optimization, and persist independent selected values.	PASS / FAIL
9	Required fields are marked/server-side validated; phone is required with approved helper; Company website is visibly Optional.	PASS / FAIL
10	Submission creates exactly one authoritative request and does not imply booking.	PASS / FAIL
11	Language determination follows content -> page -> live-switch priority.	PASS / FAIL
12	Only Dutch and English scheduling scripts are supported.	PASS / FAIL
13	AI scheduling is request-driven and constrained to configured hours.	PASS / FAIL
14	Name + company confirmation precedes request-specific details; no OTP and no budget question.	PASS / FAIL
15	Retries/callbacks are state-aware and cancelled after manual/prospect resolution.	PASS / FAIL
16	PHONE is customer-facing default with no PHONE/VIDEO selector; authorised IO SKY users can internally switch to VIDEO; trusted URL required for VIDEO.	PASS / FAIL
17	Booking/calendar commit is authoritative; every confirmed booking sends details to submitted work email; email failure does not roll back a valid booking.	PASS / FAIL
18	Customer reminders are 24h + 1h; internal reminder is 30 minutes before.	PASS / FAIL
19	Cancelled calls immediately leave Upcoming/Confirmed; reschedules do not create duplicate active occurrences.	PASS / FAIL
20	Notifications are categorized and actionable.	PASS / FAIL
21	Passing end time does not auto-complete; commercial outcome remains human-authorized.	PASS / FAIL
22	Idempotency, concurrency, stale-job suppression and provider reconciliation are implemented.	PASS / FAIL
23	Admin mutations are authorized/audited and sensitive secrets are excluded from logs.	PASS / FAIL
24	Approved DWF email architecture remains governing.	PASS / FAIL
25	All applicable criteria PASS before production release.	PASS / FAIL

Additional mandatory acceptance checks for this revision:

26. Customer form uses one required Full name field; no separate First name / Last name customer fields remain.

27. Phone control provides editable country/calling-code selection, robust international parsing, server-side revalidation, E.164 normalization, and field-specific human-readable errors without losing other form data.

28. Helper/error text below fields wraps fully with dynamic vertical spacing and never overlaps, clips, or sits on top of another field.

29. Authorised IO SKY users can set PHONE or VIDEO internally per booking without code changes; customers never receive a call-type selector.

30. VIDEO confirmation email contains a secure booking-specific meeting URL behind an IO SKY Orange #F58A1F 'Join Meeting' CTA that opens the meeting directly; PHONE confirmations contain neither URL nor Join CTA.

31. Industry uses the exact revised canonical list and a searchable alias-aware combobox; typing Dutch/English organisation terms surfaces the correct canonical category for confirmation, and only that canonical value is stored.

32. Industry search supports keyboard, mouse and touch; customers are not required to scroll the full list; aliases never create uncontrolled stored values.

33. Improvement guidance is visible directly below its heading and states that any combination is possible and uncertainty is acceptable.

34. Improvement multi-select includes 'I'm not sure yet' / NOT_SURE_YET and permits it alone or combined with any other approved improvement values.
