

IO SKY

SIGNATURE HIGH GLASS SYSTEM

Exact Visual Implementation & Global Design-System Specification

STATUS	FINAL / APPROVED
SCOPE	Entire IO SKY website and authenticated platform
NORMATIVE VISUAL REFERENCE	Attached approved IO SKY Signature High Glass master reference
BRAND DEEP TEAL	#0D2D2E
IO SKY ORANGE	#F58A1F

AI & Automation

Automate repetitive work, eliminate manual tasks
and let your business run with greater efficiency.

APPROVED MASTER VISUAL REFERENCE - this exact uploaded image is the single visual source of truth.

The reference image is embedded directly from the approved source file without redrawing or reinterpretation.

1. Non-negotiable global rule

The attached reference image defines the approved visual appearance of IO SKY Signature High Glass.

The implementation must reproduce the material appearance of this reference, not merely create a similar glassmorphism effect.

The CSS values below define the implementation baseline. The attached visual reference remains the final acceptance authority.

The Signature High Glass is a global IO SKY material, not a design for one specific card.

It must be used for every approved elevated card, card family, panel and form-container surface throughout the website and platform, including:

- Solutions cards;
- Foundation cards;
- Intelligence cards;
- AI Scan cards and panels;
- Contact form outer container;
- Discovery Call form outer container;
- authentication/login panels;
- portal cards and panels;
- dashboard cards;
- client-facing panels;
- Admin and Super Admin panels;
- Developer and Technical Operator panels;
- appropriate modal/dialog containers;
- larger information surfaces;
- all other surfaces explicitly designed as cards/panels/forms.

No page or platform area may introduce its own alternative glassmorphism recipe.

Only geometry, dimensions, padding and responsive layout may adapt to the component. Material appearance must remain the same.

2. Exact visual target

The approved reference establishes these characteristics:

- Dark Deep-Teal translucent interior
- Very restrained cool perimeter definition
- Extremely soft upper-left refraction
- Subtle optical blur/depth
- Minimal lower-right IO SKY Orange refraction
- No obvious glow
- No bright continuous border
- No navy/black interior
- No milky glass
- Content visually stronger than the glass

CONTENT → MATERIAL → LIGHT

If the lighting is one of the first things a viewer notices, the implementation is too strong.

3. Fixed design tokens

```

:root {
  --io-bg: #0D2D2E;
  --io-orange: #F58A1F;

  --io-text-primary: #F3F5F2;
  --io-text-secondary: rgba(243, 245, 242, 0.82);

  --io-glass-base: rgba(12, 43, 45, 0.68);

  --io-glass-border: rgba(224, 241, 239, 0.075);
  --io-glass-border-soft: rgba(224, 241, 239, 0.025);

  --io-glass-highlight: rgba(255, 255, 255, 0.024);

  --io-glass-orange-core: rgba(245, 138, 31, 0.20);
  --io-glass-orange-soft: rgba(245, 138, 31, 0.065);

  --io-glass-blur: 24px;
  --io-glass-saturation: 108%;

  --io-glass-shadow: 0 20px 52px rgba(0, 0, 0, 0.16);

  --io-glass-radius-card: 23px;
  --io-glass-radius-large: 24px;
}

```

These values must be stored centrally. Do not create page-specific copies.

4. Master Signature High Glass implementation

```

.io-signature-glass {
  position: relative;
  isolation: isolate;
  overflow: hidden;
  box-sizing: border-box;

  background:
    linear-gradient(
      135deg,
      rgba(255, 255, 255, 0.022) 0%,
      rgba(255, 255, 255, 0.008) 24%,
      rgba(0, 0, 0, 0.018) 58%,
      rgba(255, 255, 255, 0.004) 100%
    ),
    var(--io-glass-base);

  -webkit-backdrop-filter:
    blur(var(--io-glass-blur))
    saturate(var(--io-glass-saturation));

  backdrop-filter:
    blur(var(--io-glass-blur))
    saturate(var(--io-glass-saturation));

  border: 1px solid var(--io-glass-border);

  box-shadow:
    var(--io-glass-shadow),
    inset 0 1px 0 rgba(255, 255, 255, 0.018);
}

```

The interior must be noticeably darker than the page background, as shown in the approved reference. It must remain visibly Deep Teal.

It must never become: #000000 · navy · blue-black · charcoal.

5. Upper-left optical refraction

This is deliberately extremely restrained in the final approved reference.

```

.io-signature-glass::before {
  content: "";
  position: absolute;
  inset: 0;
  z-index: 0;
  pointer-events: none;
}

```

```

background:
  radial-gradient(
    ellipse 38% 42% at 5% 2%,
    rgba(255, 255, 255, 0.030) 0%,
    rgba(255, 255, 255, 0.012) 22%,
    rgba(255, 255, 255, 0.003) 42%,
    transparent 68%
  );

filter: blur(14px);
opacity: 0.58;
}

```

Critical acceptance rule: this must not read visually as a glow.

- No bright corner;
- no white light source;
- no cyan edge;
- no diagonal streak;
- no obvious reflection shape.

6. Lower-right IO SKY Orange refraction

```

.io-signature-glass::after {
  content: "";
  position: absolute;

  right: -8%;
  bottom: -24%;

  width: 34%;
  height: 52%;

  z-index: 0;
  pointer-events: none;

  background:
    radial-gradient(
      ellipse at bottom right,
      var(--io-glass-orange-core) 0%,
      var(--io-glass-orange-soft) 24%,
      rgba(245, 138, 31, 0.018) 44%,
      transparent 70%
    );

  filter: blur(20px);
  opacity: 0.72;
}

```

The reference image shows a small warm refraction concentrated near the lower-right edge. Do not turn this into a large orange glow.

On larger containers, do not scale the orange intensity with the size of the container.

7. Content layer

```

.io-signature-glass__content {
  position: relative;
  z-index: 1;
}

```

Glass/refraction layers must never reduce readability.

8. Reference-card geometry

```

.io-signature-glass--card {
  aspect-ratio: 2.2 / 1;
  border-radius: 23px;
  padding: 32px 40px;
}

```

The card is deliberately compact. Do not make cards taller simply to make the glass effect more visible.

9. Functional variants

The following variants use the same material class:

```
<div class="io-signature-glass io-signature-glass--card">...</div>
<div class="io-signature-glass io-signature-glass--panel">...</div>
<div class="io-signature-glass io-signature-glass--form">...</div>
<div class="io-signature-glass io-signature-glass--surface">...</div>
```

Geometry only:

```
.io-signature-glass--card {
  border-radius: 23px;
  padding: 32px 40px;
}

.io-signature-glass--panel {
  border-radius: 24px;
  padding: 40px 48px;
}

.io-signature-glass--form {
  border-radius: 24px;
  padding: clamp(28px, 4vw, 48px);
}

.io-signature-glass--surface {
  border-radius: 24px;
  padding: clamp(32px, 4vw, 56px);
}
```

These variants must NOT redefine the background, blur, border, reflection, refraction or shadow.

10. Contact + Discovery Call - explicit requirement

The entire outer Contact form container must use this exact Signature High Glass material.

The entire outer Discovery Call form container must use this exact Signature High Glass material.

Not a similar effect. Not another form-specific glass. Not plain dark teal.

They must visibly belong to the same material family as the approved reference image.

A larger form changes only its dimensions and content layout. Larger surface ≠ stronger glow.

11. Solutions - explicit requirement

Every approved card on Solutions must use the same Signature High Glass material.

The cards may vary in width, height, content and internal layout. They may not vary in glass material.

12. Entire platform - explicit requirement

This requirement extends beyond the public website.

The same Signature High Glass system must be used throughout the authenticated IO SKY platform wherever the UI specification calls for a:

Card · Panel · Form Container · Elevated Information Surface

This includes Client, Admin, Super Admin, Developer and Technical Operator interfaces.

There must not be: Website Glass · Portal Glass · Admin Glass · Form Glass.

There is only: IO SKY SIGNATURE HIGH GLASS.

13. Important distinction: every card vs every rectangle

Every actual card/panel/form-container surface must use Signature High Glass.

However, developers must not wrap every input, table cell, navigation item or small UI rectangle in glass.

Correct:

```
Signature Glass Contact Form
├─ Name input
├─ Email input
├─ Company input
├─ Subject select
└─ Message textarea
```

Incorrect:

```
Glass Contact Form
├─ Glass Name input
├─ Glass Email input
├─ Glass Company input
├─ Glass Subject
└─ Glass Message
```

The material defines meaningful elevated surfaces, not every UI boundary.

14. No local tuning

Developers must use the centrally defined Signature High Glass tokens. Page-specific or component-specific optical tuning is not permitted unless explicitly approved by IO SKY.

The earlier optional tuning ranges are intentionally removed from this final specification.

15. Master-reference supremacy rule

The attached approved reference image is the normative visual target. Numeric CSS values do not override the visual reference. If an implementation using the specified values renders materially differently because of browser, rendering engine, compositing context or underlying content, the implementation must be calibrated centrally until it visually matches the approved reference. Such calibration must be applied to the shared Signature High Glass system, not as a page-specific override.

16. Acceptance comparison

Developers must provide a visual implementation of the AI & Automation reference card before globally rolling the component out.

It must be reviewed side-by-side with the attached master reference.

Approval criteria:

- 1. Card interior darkness matches.
- 2. Deep Teal character matches.
- 3. Blur/material depth matches.
- 4. Upper-left refraction is equally restrained.
- 5. Perimeter brightness is equally restrained.
- 6. Orange lower-right refraction has comparable intensity and spread.
- 7. No additional glow is present.
- 8. No cyan cast is introduced.
- 9. Glass does not become black/navy.

- 10. Content remains visually dominant.

Only after this reference implementation is approved should the shared component be propagated across the website and platform.

17. Final non-negotiable rule

The attached reference image is the single visual source of truth for IO SKY Signature High Glass. The Signature High Glass must be implemented as one centrally controlled design-system material and used consistently for every approved card, panel, form container and elevated information surface across the entire IO SKY public website and authenticated platform. Component size, geometry and content may change; the glass material must not. No alternative page-specific, role-specific, form-specific or component-specific glassmorphism interpretation is permitted without explicit IO SKY approval.

END OF FINAL APPROVED SPECIFICATION
